ELLA, KIANNA AND KELSEY

FACE THE FACTS!

Team studio

MEET THE TEAM

- Kianna
- Kelsey
- Ella
- We are team studio, made up of three students from Darwen Aldridge Enterprise Studio. We all study Citizenship.

THERE'S A PROBLEM

- Popular “trustworthy” social medias and news sites are providing us with disinformation.
- People are not willing to trust information that is real and may affect them because they are afraid that it may be disinformation with no way to see if it is truthful.
- Disinformation is causing major paranoia, discomfort and distress about untrue events. It also impacts peoples decisions and beliefs.
- A real life example of this affecting someone: Many news articles reported that dialing 55 on a 999 call will give police the resources to locate them without saying anything. This was untrue and many people tried this in real emergency situations, leaving police unable to locate them and being put in danger.

OUR SOLUTION AND OUR AIM

- FACE THE FACTS

- Our app's premise is to combat the spread of fake news and disinformation and give people a reliable place to fact check any articles they are unsure about.
- We aim to make our app accessible to all, especially people that are extra vulnerable as these are people who are most affected by fake news. We want to give information in simple and easily digestible formats to combat confusion.
- Our app stops people panicking over fake news by giving them a reliable place to check the real facts and know what is really going on.
- We want our app to be unbiased, not leaning to one side and making certain people and things seem better than another. We want a true and balanced approach.

HOW DOES IT WORK ?

- If someone has seen a news article or fact online that they are unsure of the legitimacy , they can search it on our app. Our app will then tell them the true story and debunk any misinformation.
- When our app is opened, the top 10 most searched stories of that week/day will be visible for easy access. As well as the search bar and links to websites that can offer support if you are worrying about news you have seen online.
- If a user cannot find a news article or fact they are looking for ,they can request for it to be added and/or submit their own information on the topic to be checked.

WELCOME PACA

MAISIE AND TALUKA

BEEE BAKERY

WHAT IS BEEE BAKERY?

- It is a themed bakery that takes pride in helping others.
- The theme changes each week to keep consumers interested
 - Alice in Wonderland
 - Different countries including Mongolia
 - Flavours/colours

WHAT IS BEEE BAKERY?

- Each day big bakery items, such as cake, are auctioned at a fair price to cover the cost of the ingredients used and to create a buzz about the bakery
- Coffees and small baked treats are sold throughout the day
- For everybody to be satisfied we give all leftovers to homeless people
- No plastics are used in our packaging

WHAT IS NEXT FOR BEEE BAKERY?

- We would like to expand to other bakeries
- Create a points system for the bakery where each £1 spent gives customers 1 point and they can use these to redeem baked goods
- Create a new product line of refillable coffee pods for the coffee machines of which they can also buy our ground coffee

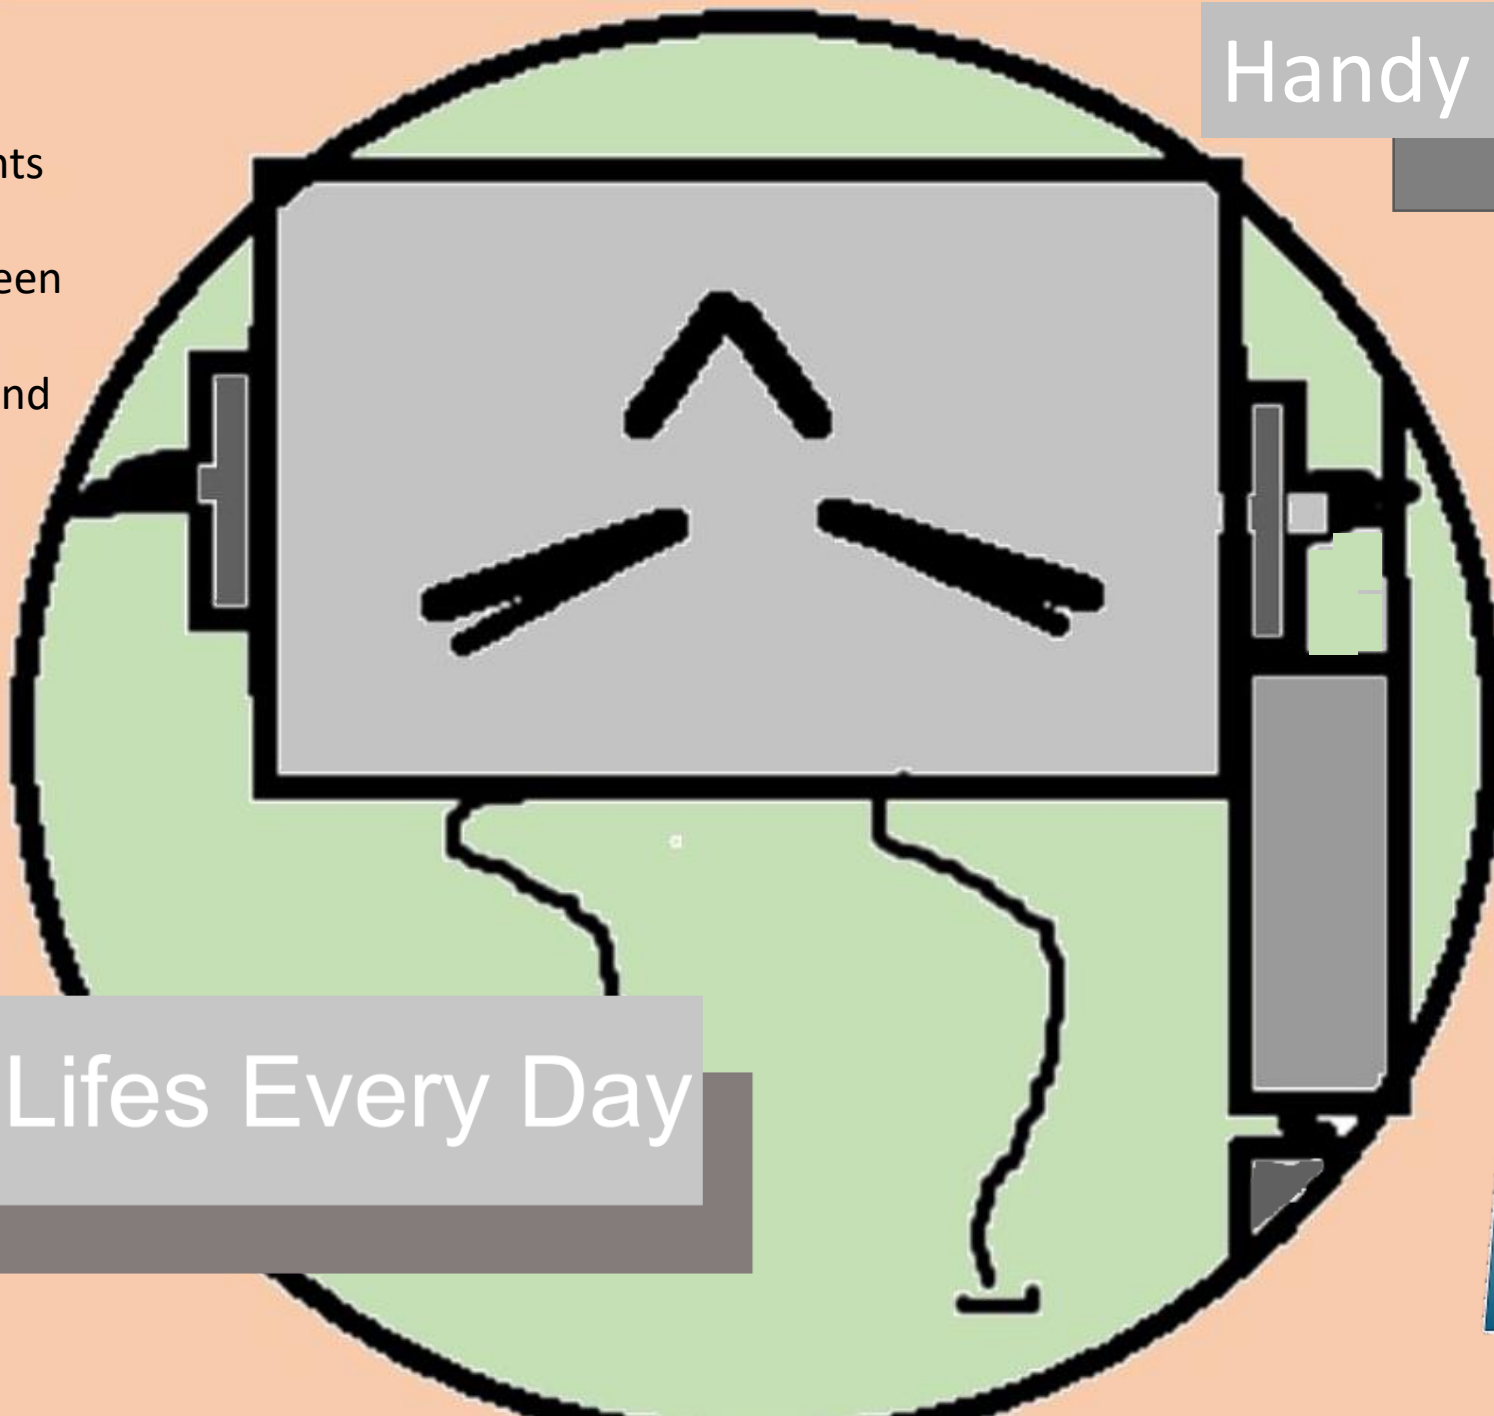

Thanks for watching

WELCOME DARWEN VALE

EVELYN, EMILY AND CHARLOTTE

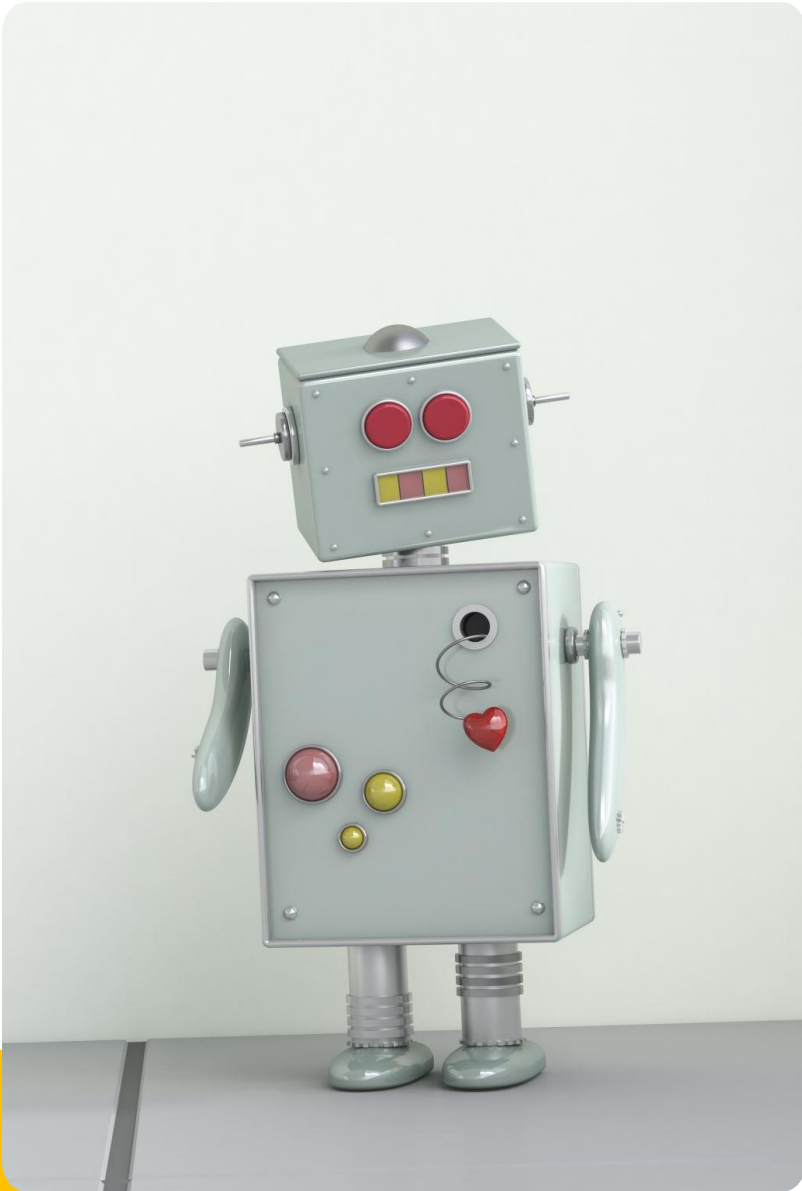

Hello, we are Evelyn,
Charlotte and Emily we
are all year eight students
from Darwen vale
high school. We have been
working on this project
for the last few weeks and
this is what we
have produced.

Handy Helper Robot

Helping Lives Every Day

HWR

The robot

This robot will be able to assist people that have disabilities, ranging from physical disabilities to depression or anxiety. It can also just make everyday life that little bit easier and manageable.

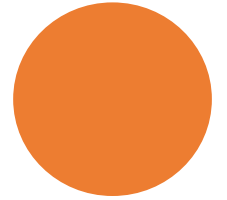

Our initial thoughts

- In the beginning, we were thinking to do a project about the environment and how we can help, with these big (or small) ideas that can create a positive impact on the current climate issue that's effecting our planet. However, we thought that that these issues take up most of the spotlight already and although they are extremely important in their own way, we thought we would cover a more underlying topic, that of mental health. We believe that mental health issues, despite being talked about, are not talked about enough and need to be taken more seriously. And that's where the Handy Helper Robot can help.

This robot you can do many things such as:

- Cleanup for you if you have mobile difficulties or depression as people with depression tend to struggle to clean up after themselves as they find it hard work and difficult to do so, which then can impact their mental health.
- You can also set reminders to take your medicine and to make it so you can interact more with your robot, it will store and deliver your medicine to you or anything you need such as sensory products for people who need them.

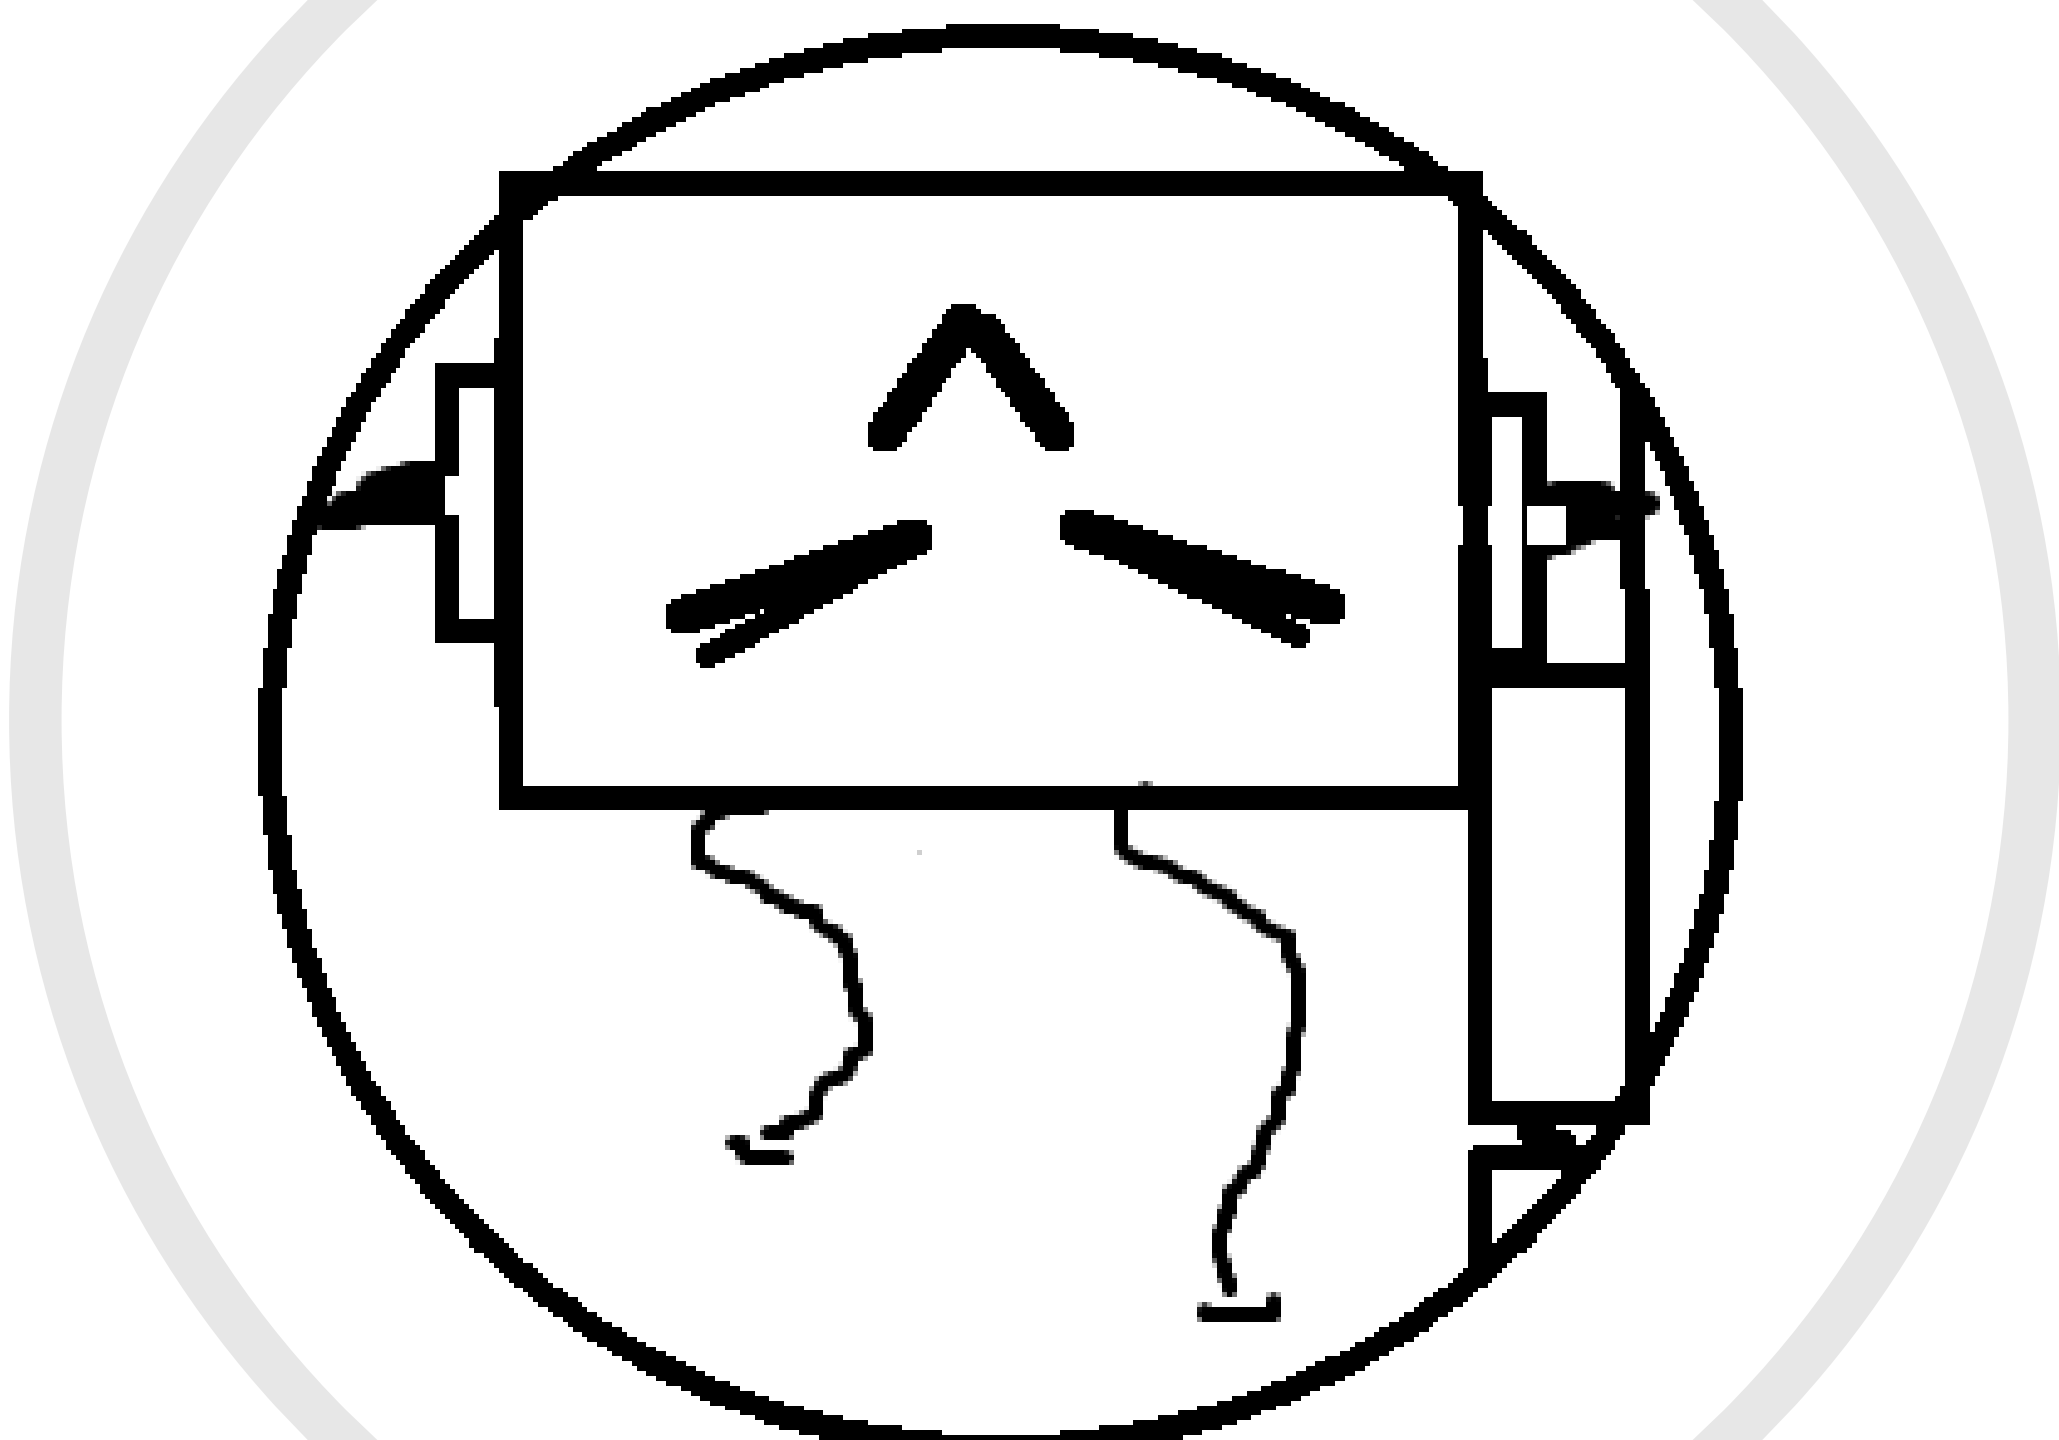

You may be wondering why we think our robot would be beneficial to society. Well firstly, it is a very customizable product and therefore can easily fit your personal needs and lifestyle, e.g., reminders for certain tasks. Our robot is also here to make tasks that you have no choice but to do more enjoyable, for example for younger children there could be a reward system, like a sticker chart that would lead to a larger reward in the future or for older people it could involve them being rewarded with an extra hand doing something around the house (as some people would struggle with that or just could use the extra help) and you can of course always customize it to your own personal taste.

There are many reasons why this robot could be very helpful so here are the main reasons and why

What !!!	Why???
Bluetooth control	To make things easier you can just type in, or voice control what you need into your phone to make things easier and quicker for your robot to excess and/or find for you.
Multiple person control	This is important because your family's will know what you need so you can't disable the things such as taking your medicines and things that fall under that category in the robot.
Reminders	The robot also sets you reminders such as to take medicine, clean yourself and your home/ your room

WELCOME PACA

ANGELA, HATTIE, MILLIE AND MOLLY

Helping hands

By Angela, Hattie, Millie and Molly

What's our product?

- + The name of our product is 'Helping Hands', a box that contains things such as:
- + Necessities
- + Food supplies
- + Period and healthcare products

Our aim is to beat poverty and support the people who need it most. And you can even plant your box after use!

What's our business?

We are a company that prides ourselves in supporting small businesses, helping the environment and trying to make the world a better place.

But our main focus is solving poverty in communities all around the world.

We're eco-friendly and discrete in the way we gift our boxes.

How do we do it?

- + Using our app 'Helping Hands' the community can donate to help our cause, including food and menstrual products.
- + You can also use the app to get one of the boxes delivered to your door.
- + Depending on your situation, the app can be used to either to give or receive.

How we get profit

- + You may be wondering how we make our income, and in fact the answer is simple:
- + Using our app, you can buy eco-friendly products by small business owners for your friends and family.
- + A small proportion of the money raised for online boxes will go towards administration and helping our business.
- + We will also be looking for corporation sponsorship with brands and supermarkets.

"Be the change you want to see"

Thank you for watching

We hope you can support us on our helping
hands journey! 😊

WELCOME DARWEN VALE

DANIEL, ANTHONY AND HARRY

MOVEN

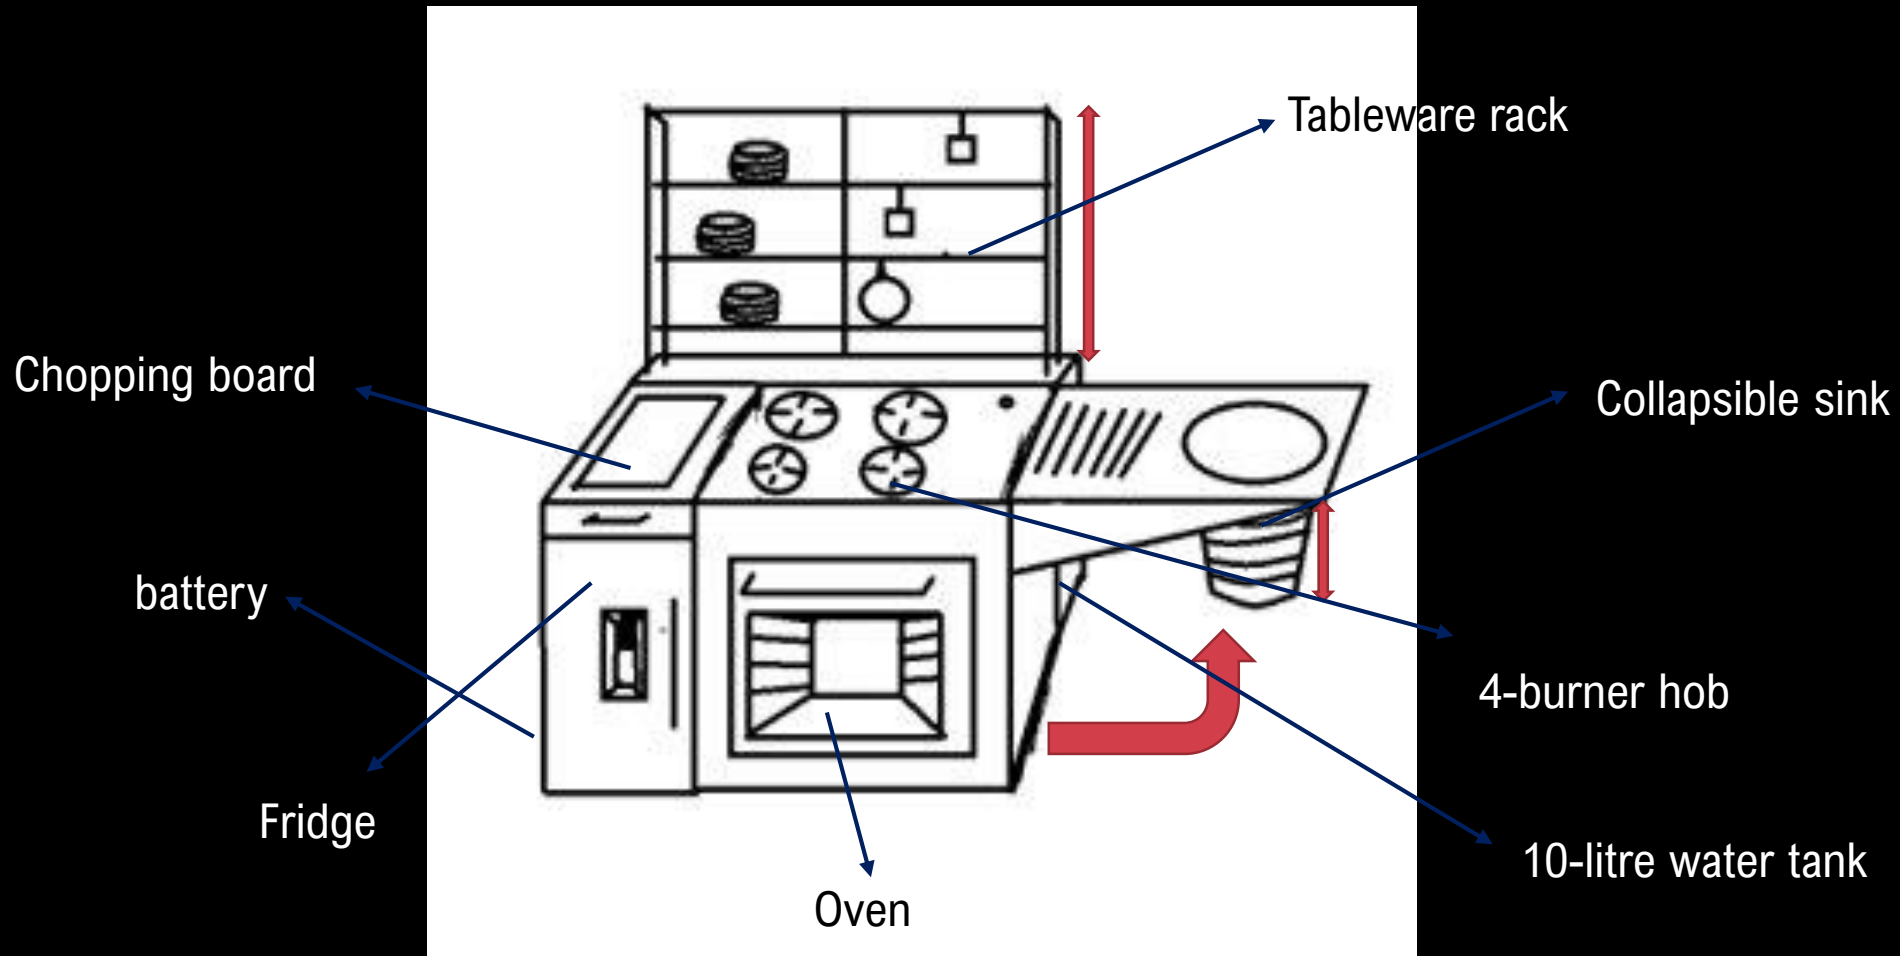

My Moveable Oven

Daniel, Anthony and Harry

What is our product?

The Moven is a product designed to enable its user to produce hot meals anywhere. It uses a battery to power an oven, 4-burner hob, and a fridge. It also has a chopping board, tableware rack and collapsible sink with a 10-litre water tank.

What does our product look like?

Where can it be used?

Its compact kitchen-design means its uses in its field are endless. The Moven is perfect for days-out at the beach, camping trips and barbecues in the countryside. As well, the Moven could be used as a temporary kitchen if a new one is being fitted or even as a full-time kitchen in an area where space efficiency is key.

How can you use our product?

- The Moven can be used in however the user wants. The Moven is 50cm by 50cm by 50 meaning it is great for compact areas and can be fitted to a trolley with all-terrain wheels so it can go to those off-the-track places. This allows for an enjoyable cooking experience where it may not be traditionally possible.

How can our efforts help the world?

At Moven, we strive to create a product to be used by all which is why we will be giving hundreds of Movens to humanitarian efforts to help the less fortunate and the supplies to cook hot, nutritious meals to those who need it most.

Thank you for listening

WELCOME UTC

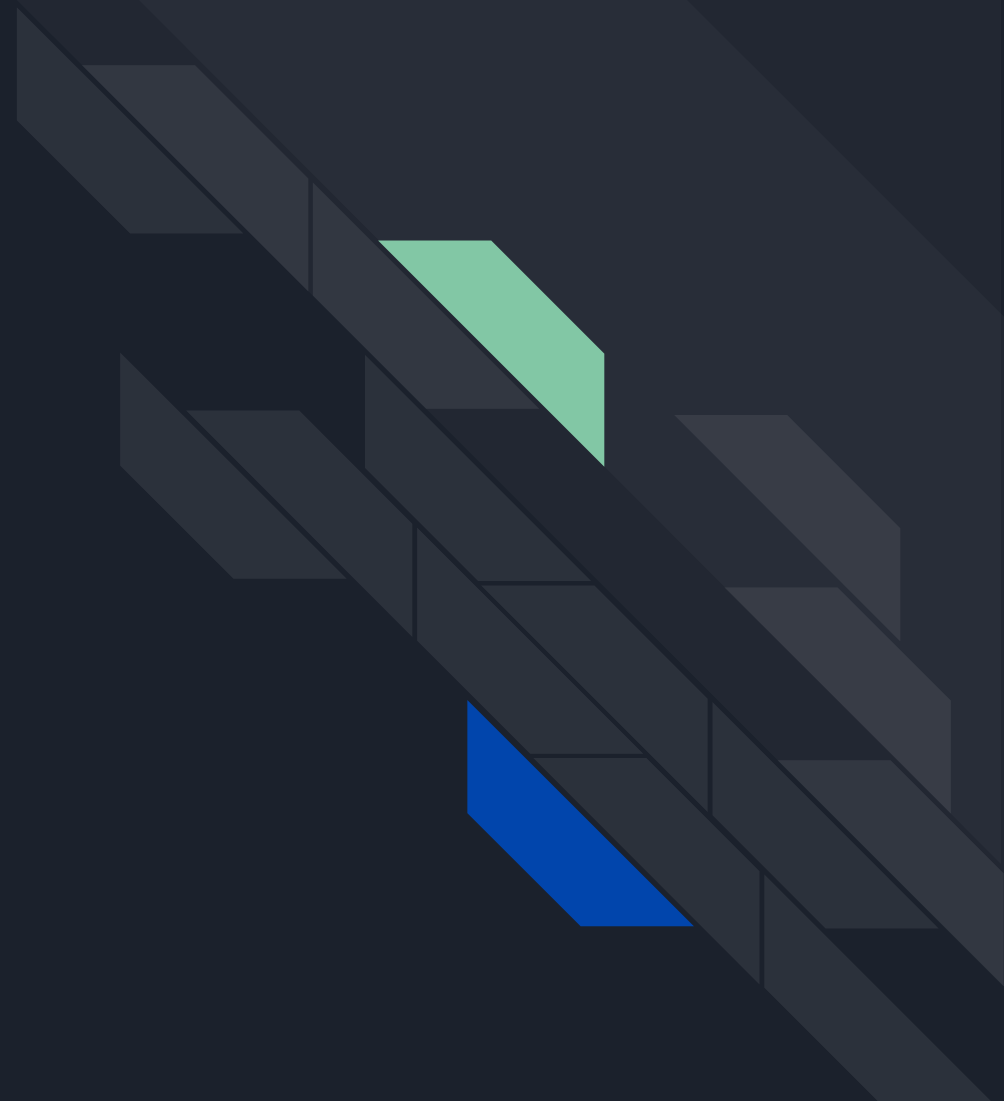

RONNI, ALEKS AND KAI

Array Swimwear

Brought to you by Ronni, Aleks and Kai

Who are we?

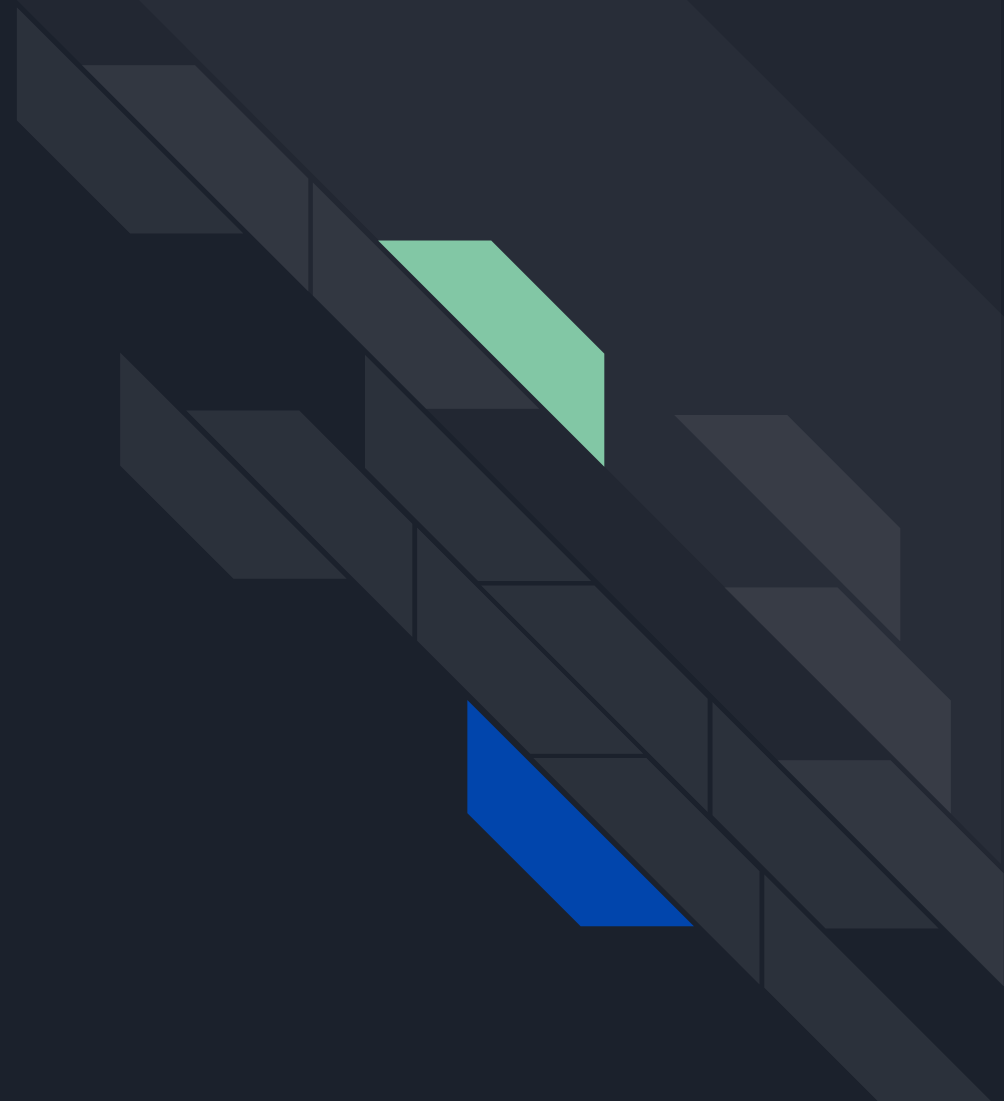

Who are we?

We are young entrepreneurs wanting to make swimwear more accessible to all genders no matter what time of the month it is. We are from UTC@MediaCityUK and we strive to make the swimwear community a better place for all and make it more accessible for people who aren't comfortable in their own bodies.

The Problem

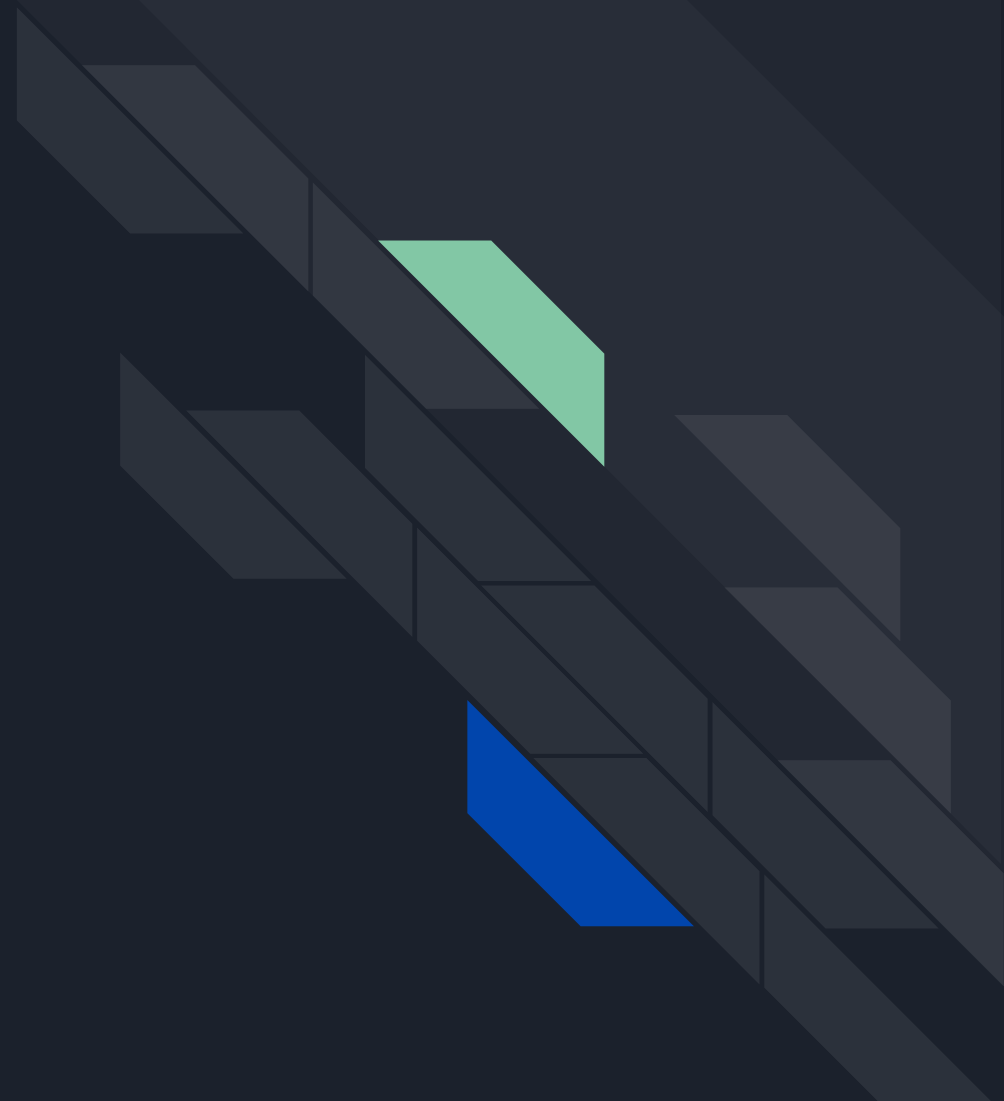

The Problem

The problem is there is a stigmatism around people going swimming on their period and they often need to use tampons, which can lead to toxic shock syndrome and you can die. This is a worldwide problem and makes some people ashamed to go swimming on their period when they just want to go and have fun. Until now there was no way around this unless they wanted to go swimming in waterproof nappies, most people don't want this. But even though they can't go swimming, if you're a girl and your friends ask you to go swimming and you don't want to put a tampon in you end up getting called a prude.

What is our resolution?

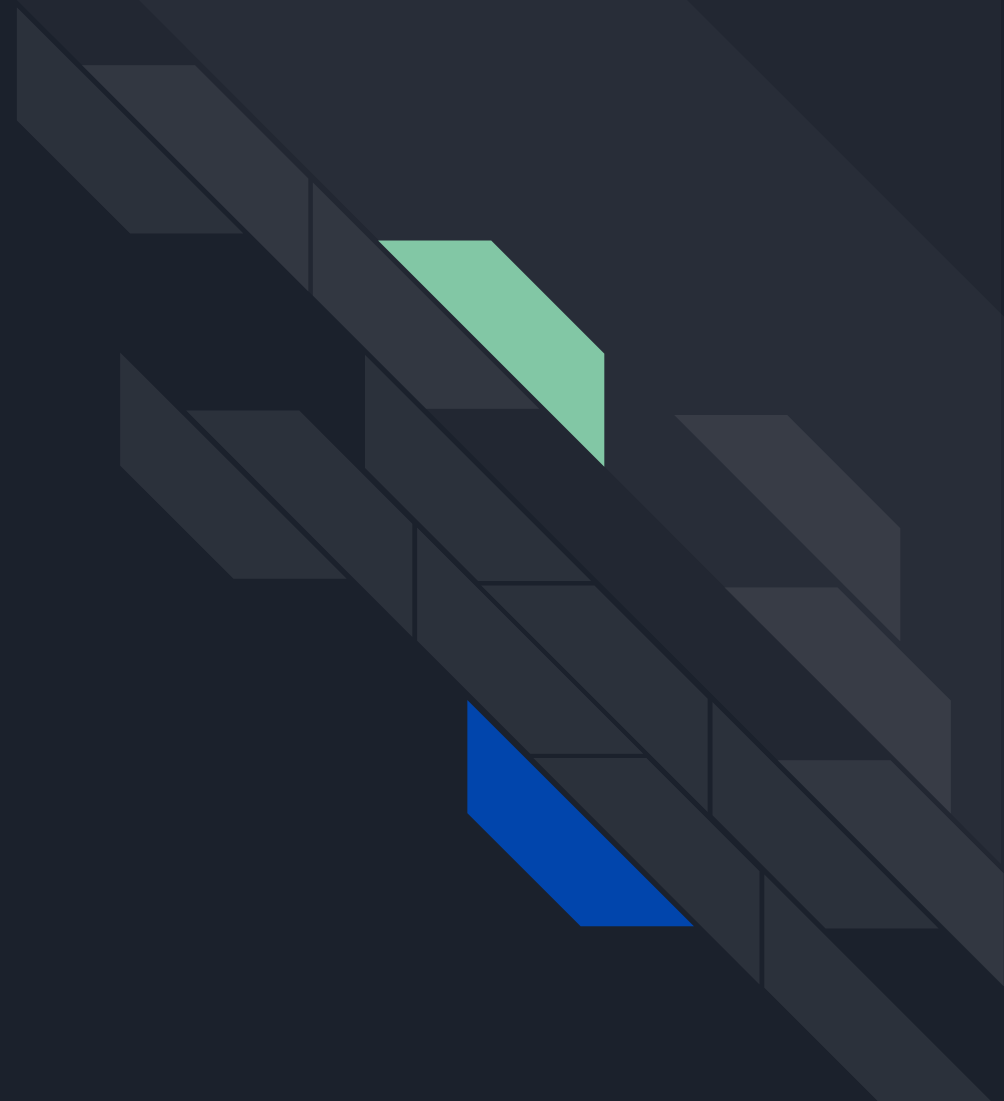

We have an Idea!

We have thought of an idea to help combat this issue. Period Swimwear. So even if you are on your period, you can still go swimming, even if you don't want to put a tampon in!

We are looking to make swimwear for anyone who has their period; this will also include swimming trunks for people who may not feel comfortable in their own body.

How does it work?

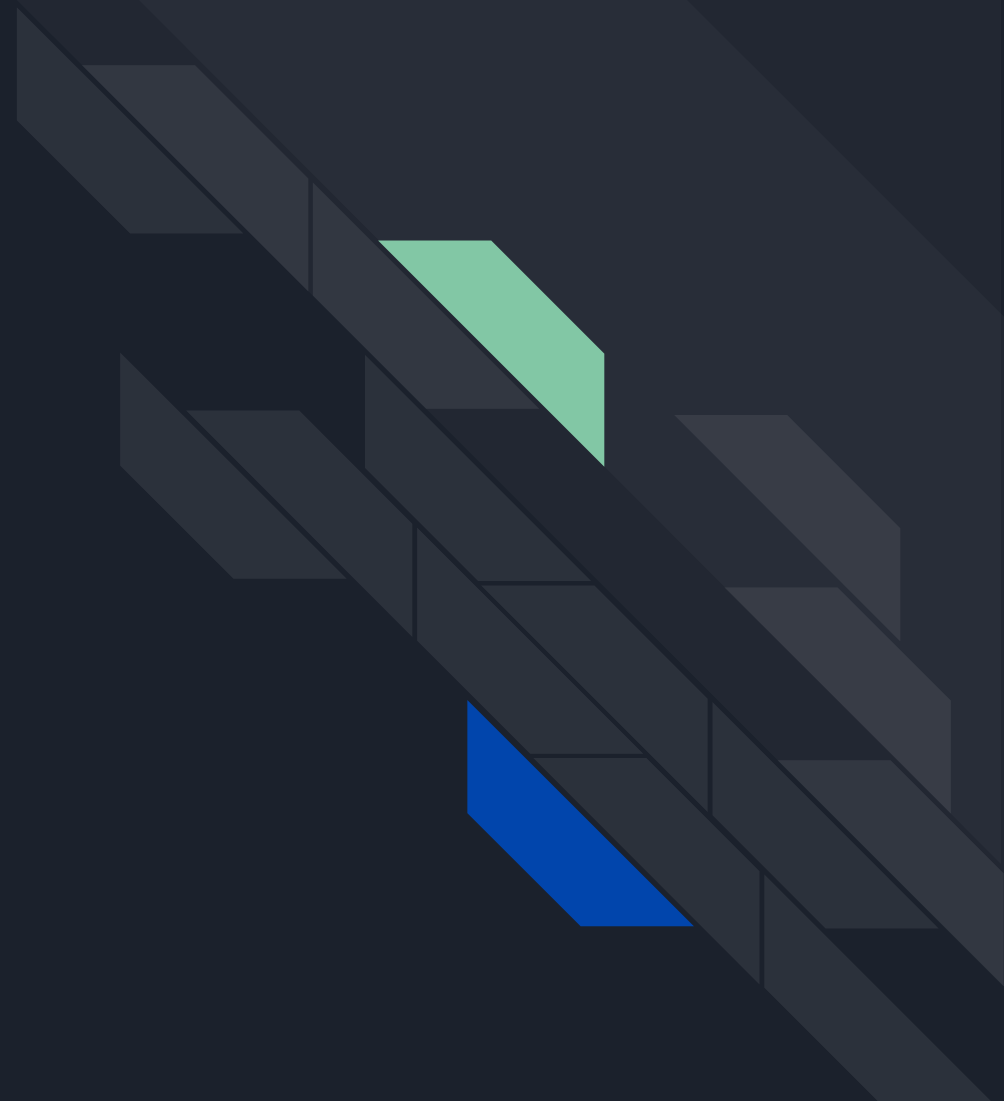

Here is how it works.

Our swimwear will be made out of super absorbent materials, as well as a chemical that will allow it to soak up more. The casing to this will be made out of a very thin layer of neoprene so that just in case it does leak, there will be more protection. The rest will be made out of water-resistant cotton, or a special comfortable nylon.

We want to make everyone who wears this as comfortable as possible!

What's in the Future?

What we would do next?

If our team had the chance to move forward, we will start thinking about logistics and how we can make a prototype of this, as this will allow our team to take development further with CAD designs, then material testing and more.

WELL DONE!!!
